

# City of Villa Rica

## Water Conservation

### Overview

Water conservation in Villa Rica is more than a "feel good" endeavor. The City's comprehensive program provides solutions for maximizing use of a crucial natural resource.

Demand for water during the hottest, driest days can be more than twice the daily average. Reducing this spike in usage will allow the City to minimize purchases of more expensive "purchased water".

### Water Wise Hotline

(678) 785-1012 – Monday through Friday, 9:30 a.m. to 4:30 p.m.

Has your water use risen astronomically? Would you like to know how much the average household uses? Call the Water Wise Hotline to:

- Discuss your water consumption
- Schedule an assessment of your home to identify leaks (\$5 cost)
- Receive dye tablets to test for toilet leaks

### Voluntary Measures, Incentives & Regulations

The water conservation program was established in 2005 to efficiently manage Villa Rica's water resources and to minimize reliance on outside sources.

The Water Conservation Plan calls for reducing the Town's average per capita use by 5 percent by 2015. The plan incorporates public education, landscaping and irrigation ordinances, rates structured to encourage conservation, and accountability for water use in City government operations.
